How Trivago Works ?

Traveller Search

A user visits Trivago and searches for hotels based on location, dates, and preferences, generating demand on the platform.

1

Platform Aggregation

Trivago aggregates hotel listings and prices from multiple OTA partners, presenting them in a unified comparison interface.

2

Partner Bidding

OTA partners compete in real time by placing cost-per-click bids to gain higher visibility for their offers across markets, devices, and categories.

3

User Click Action

The user selects a preferred offer and clicks on it, getting redirected to the OTA partner's website to complete the booking.

4

Revenue Generation

Trivago earns revenue for each click generated, regardless of the booking completed, making CPC bidding the core revenue driver.

5

Key Insights:

- Most of the revenue comes from a few big partners like Booking Holdings and Expedia.
- Their bids keep changing based on location, device type, and hotel type.
- Even a small drop in bids in one segment can cause a big loss in revenue without being noticed.

The Problem

Delayed Revenue Visibility

Partner bids change frequently, often on an hourly basis, but performance is reviewed only weekly, which allows revenue drops to go unnoticed for 5 - 7 days.

Hidden Underperformance

Strong overall metrics, such as high conversion rates, often hide underperforming segments, which quietly reduce total revenue without being clearly visible.

Early stage Intelligence function

The Chief Intelligence Officer was appointed on March 12, 2026, and is currently in the early stages of building the intelligence function from scratch.

Although there is a clear expectation to deliver measurable results within 90 days, there are currently no dedicated tools available to support real-time monitoring or actionable insights.

Absence of a Real-time Intelligence System

There is no automated system in place to continuously monitor key metrics and detect anomalies, which forces teams to rely on manual analysis and delayed reports.

Dependence on Key Partners

A significant portion of revenue depends on a few major partners, and even small bid changes from them can have a large impact, yet these changes are not immediately visible.

You're Already Halfway There

What You've Already Built

Trivago has an internal system, trv-AI Radar, that tracks 42 AI tools across different functions with a structured evaluation process.

The User Research team is already using AI to monitor competitors more effectively, doubling coverage through automated news and A/B test tracking.

AI-driven marketing campaigns are active in 30 countries, with branded traffic growing faster than overall revenue.

The Missing Piece

Despite strong AI adoption, there is no system that continuously monitors core business KPIs in real time.

There is no automated way to detect issues, identify root causes, and trigger action instantly.

Meet DataGenie

DataGenie is an AI-powered analytics platform that continuously monitors your data, surfaces insights you didn't know to look for, and alerts your teams before problems escalate, without waiting to be asked.

Our Vision

Our vision is to democratize insights for every user in an organization, so that they can perform and deliver their best.

Our Mission

Our mission is to deliver the power of automated insights intelligence & the strength of a large analysts team to every business.

What We Do ?

Seamless Integration

DataGenie works with your existing data sources, so you do not need to rebuild or modify your current systems.

Root Cause Identification

When a change occurs, it identifies the exact root cause across dimensions such as country, device, partner, and category.

Continuous Monitoring

It tracks key performance indicators continuously at hourly or daily levels using time-series anomaly detection.

Actionable Insights

It delivers a clear, plain-language **Top Story** to the right person early, before the impact becomes larger.

Not a Dashboard. Not a Reporting Tool.

An Autonomous Intelligence Engine That Works With Your Existing Systems.

This Is What Your Monday Morning Looks Like With DataGenie

! CPC Revenue Anomaly — DACH | Desktop | Hotel

! What Happened

DACH CPC revenue dropped by **14%** compared to the 7-day average, resulting in a loss of approximately **€38,000** in a single day.

This happened even as sessions increased by 9% and search volume increased by 11%.

Root Cause

Booking Holdings reduced bid prices for DACH Desktop Hotel traffic by **21%** at **06:00** CET. Two mid-tier OTA partners followed with additional bid reductions of **8–12%**, possibly reacting to the same market pricing change.

Bookin
HRS

Without DataGenie

This issue would likely have appeared only in the next weekly report, delaying action and increasing revenue loss.

Every Euro Trivago Makes, DataGenie Watches.

Revenue Stream	Importance	How DataGenie Monitors
CPC Auction	~95% of revenue	Detects partner bid anomalies across country × device × category in near real-time
Conversion Rate	Core KPI	Breaks down performance by segment to surface underperforming combinations
Marketing ROAS	Millions of € spent across 30 countries	Tracks ROAS daily and flags unusual changes by market
Business Studio Subscriptions	~5% of revenue	Identifies early churn signals by region, hotelier tier, and plan type
Regulatory Compliance	Active in Israel, Europe, Australia	Monitors sponsored vs organic ratios and checks discount consistency

The Business Case

A typical CPC revenue anomaly can cost around **€38,000 per day**, as seen in the **DACH** scenario. With the current weekly review cycle, detection is delayed by 5–7 days, allowing losses to accumulate.

With same-day detection, DataGenie enables immediate action and helps avoid losses of **€190,000 to €266,000 per incident**.

This aligns with Trivago's **Power of Proof** culture, where decisions rely on clear, data-backed evidence, which **DataGenie** provides automatically.

It also supports regulatory compliance by continuously monitoring ranking transparency and pricing consistency across markets like **Israel, Europe, and Australia**.

One Ask. Thirty Days.

The Ask: A 30-day Pilot with the Intelligence Team

Week 1

DataGenie connects to your existing CPC and conversion data sources and begins continuous monitoring across key dimensions such as country, device, and category, without requiring manual setup.

Week 2

The first **Top Stories** are automatically generated, highlighting meaningful changes in performance, identifying anomalies, and explaining their root causes in clear, plain language.

Week 3 & 4

These insights are reviewed with the team to validate accuracy, understand business impact, and take action, while also documenting outcomes such as revenue protected and issues detected.

Run a Pilot. Measure the Impact. Scale with Confidence.

Our Customers

Thank You.
